

ITEST™ LEAF

AGRI TECHNOVATION

integrates individual leaf samples and maps with the interpretation of leaf (tissue) analysis, including ratios between nutrients and corrective recommendations.

It is recommended that leaf samples be taken representative of soil types if soil classification maps are available. Leaf samples should be taken, per phenological stage from the different crops.

SAMPLES

LABORATORY

REPORT

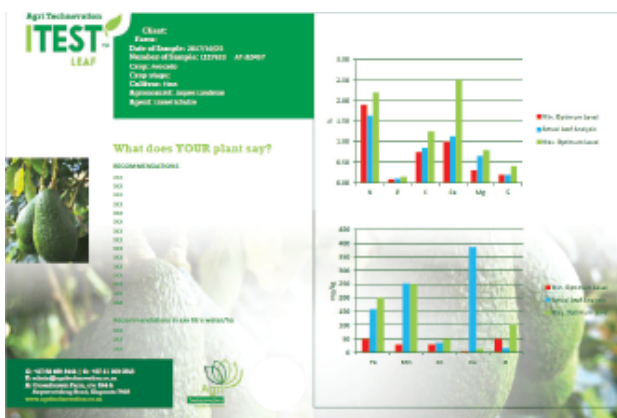

RECOMENDATIONS

In case of deficits and / or imbalances, recommendations are made for possible remedial actions.

Fieldwork (sampling) is included in the price, provided that more than 30 samples are taken. For less than 30 samples, a Field technician fee will be added. Regardless of whether the Agri Technovation field technician or customer draws samples, the costs include courier costs to the laboratory, laboratory analysis, data processing and the ITEST™ Leaf report.
